LADS Network Solutions and A1 Delivery Service Partner to Improve On-Time Deliveries and Reduce Fuel Cost

GPS Software allows A1 Delivery to better coordinate the pickup and delivery of critical goods in Houston and New Orleans

St. Louis, July 28, 2009 —LADS Network Solutions, Inc, (LADSnet) a St. Louis-based software developer of Supply Chain Management solutions designed to improve customer service through real-time GPS and wireless data communications, has partnered with A1 Delivery Service of Houston, Texas, a provider of same day delivery services better known as the 'last mile' in the supply chain. LADSnet provide A1's Delivery services with software that improves both the real-time tracking of critical deliveries and the vital communications network between A1 Delivery Service and their customers.

"We are pleased to partner with A1 Delivery as they provide pickup and delivery of critical goods many times in less than 90 minutes," said Daniel Huber, President of LADS Network Solutions. "We are proud that our software capabilities can be a part of this crucial supply chain process. We believe that together we can make a more reliable and verifiable environment for companies that absolutely must have packages delivered the same day or even the same hour."

This partnership enables A1 Delivery to continuously GPS track shipments, and accurately predict the arrival time of critical deliveries. Both of these features will help A1 achieve their overall objective of improving their managerial control over the delivery process while creating a more efficient and effective organization.

A1's main concern has been the inability to have real-time visibility of drivers and shipments.   Since many of their deliveries must be completed the same day or even the same hour, it is vital that both A1 Delivery and their customers know where the packages are at all times and when it will arrive.

"LADSnet' software provides us with the ability to GPS track our drivers every minute of the day" said Craig Evans, co-owner of A1 Delivery. "The software capabilities that LADSnet brings A1 enable us to provide for quicker response to customers urgent delivery requirements and efficiently communication anticipated delivery times with our customers thereby creating must happier customers."
