**AtCourier Deploys GPStrac and Saves \$15,000 for Fleet of 23 Drivers**  
*GPS Software allows AtCourier to better coordinate the pickup and delivery of critical goods for same day delivery in greater Dallas/Ft Worth area*

St. Louis, February 5, 2009 —LADS Network Solutions, Inc, (LADSnet) a St. Louis-based software developer of Supply Chain Management solutions designed to improve on-time deliveries through real-time GPS and wireless data communications, has partnered with AtCourier of Dallas/Ft Worth a provider of same day delivery services better known as the ‘last mile’ in the supply chain. LADSnet provides AtCourier’s same-day delivery services with software that improves both the real-time tracking of critical deliveries and the vital communications network between AtCourier and their customers.

“We are pleased to partner with AtCourier as they provide pickup and delivery of critical goods, many times in less than 60 minutes for local companies,” said Daniel Huber, President of LADS Network Solutions. “We believe that together we can make a more efficient, reliable, and verifiable environment for delivery companies that absolutely must have critical packages delivered the same day or even the same hour.”

This partnership enables AtCourier to GPS track shipments every 60 seconds of the day, and to accurately predict the arrival time of critical deliveries. GPStrac is web-based so everyone at AtCourier has a instant view of each drivers current location. GPStrad has helped AtCourier achieve their overall objective of improving their managerial control over the delivery process while creating a more efficient and effective organization and enhancing their ability to communicate with their customers.

“We upgraded to GPStrac from a different tracking system and saved over \$15,000 over 5 years and received a superior product for my fleet of 23 drivers,” said Joe Azzaro, owner of AtCourier. “Rarely do you save money and get a better product. But that is exactly what happened when we moved to GPStrac. Now we receive GPS location updates over 60 seconds from GPStrac as compared to every 5 minutes from my old system, plus GPStrac uses Google Maps with real-time traffic overlays so we can quickly alert drivers of problem areas to avoid around town. GPStrac has elevated AtCourier to the highest level of technology and customer service in the Dallas/Ft Worth area.”
